

Package ‘repfun’

July 1, 2025

Title Create TLFs using R functions styled after SAS macros

Version 0.0.0.9000

Description

A clinical reporting toolkit of R functions that are written to mimic the style of SAS reporting macros. The purpose is to generate TLFs (tables, listings and figures) to support clinical trials.

rs_setup

Pass values to setup function and the global environment will be arranged for use reporting tools.

Description

Pass values to setup function and the global environment will be arranged for use reporting tools.

Usage

```
rs_setup(
  R_DICTION = "./data",
  R_MACDIRS = c("."),
  R_DDDATA = NULL,
  R_OTHERDATA = paste0("./data"),
  R_INPUTDATA = paste0("./data"),
  R_RAWDATA = paste0("./data"),
  R_SDATMDATA = paste0("./data"),
  R_ADAMDATA = paste0("./data"),
  R_RFMTDIR = paste0("./data"),
  D_CENTID = "SITEID",
  D_DATADATE = NULL,
  D_DSPLYNUM = 1,
  D_DSPLYTYP = T,
  D_FONTSIZE = 10,
  D_KEEPPOPVARS = NULL,
  D_OUTFILE = "./inst/t_ru_list_1.rtf",
  D_PGMPTH = "./R/rs_setup.R",
  D_STUDYID = NULL,
  D_STUDY_DESC = NULL,
  D_POP = "ITTEFL",
  D_POPDATA = NULL,
  D_POPLBL = "Intent-to-Treat",
  D_SUBJID = "USUBJID",
  D_SUBPOP = NULL,
  D_SUBSET = NULL,
  D_TITLE1 = NULL,
  D_TITLE2 = NULL,
```

```

D_TITLE3 = NULL,
D_TITLE4 = NULL,
D_TITLE5 = NULL,
D_TITLE6 = NULL,
D_TITLE7 = NULL,
D_FOOT1 = NULL,
D_FOOT2 = NULL,
D_FOOT3 = NULL,
D_FOOT4 = NULL,
D_FOOT5 = NULL,
D_FOOT6 = NULL,
D_FOOT7 = NULL,
D_FOOT8 = NULL,
D_FOOT9 = NULL,
D_USERID = Sys.getenv("DOMINO_USER_NAME"),
D_RTFYN = "N",
D_DEBUG = 0
)

```

Arguments

R_DICTION	Location of reporting dictionaries.
R_MACDIRS	List of folders to search for functions when they are invoked.
R_DDDATA	Location to write DDDATA reporting data sets.
R_OTHERDATA	Location of additional production data sets.
R_INPUTDATA	Location of permanent formats data sets and miscellaneous data sets.
R_RAWDATA	Location of raw data sets.
R_SDTM DATA	Location of SDTM data sets.
R_ADAM DATA	Location of ADAM data sets.
R_RFMTDIR	Location of format catalogs and corresponding lists.
D_CENTID	Variable name for investigational center.
D_DATADATE	Date of data sets for use in titles/footnotes.
D_DSPLYNUM	Display number for title.
D_DSPLYTYP	Type of Display (T,L,F).
D_FONTSIZE	Size of font on output file which is RTF by default (with automated PDF conversion via script).
D_KEEPPOPVARS	Variables to keep on the population data set when merging to apply populations and sub-populations.
D_OUTFILE	Production location for output TLFs.
D_PGMPTH	Path of the driver file that generates current outputs or data sets.
D_STUDYID	Protocol ID for the study.
D_STUDY_DESC	Description of Study.

D_POP	Population variable from ADSL that must equal Y for subjects to be included in the analysis.
D_POPDATA	Data set that contains the population to be analyzed.
D_POPLBL	Label for population being analyzed which can be used in the TLF header.
D_SUBJID	The variable used to uniquely identify a subject in this analysis.
D_SUBPOP	Condition to identify the sub-population when applied to ADSL.
D_SUBSET	Condition to filter data from incoming source data sets used for this TLF.
D_TITLE1	First title text.
D_TITLE2	Second title text.
D_TITLE3	Third title text.
D_TITLE4	Fourth title text.
D_TITLE5	Fifth title text.
D_TITLE6	Sixth title text.
D_TITLE7	Seventh title text.
D_FOOT1	First footnote text.
D_FOOT2	Second footnote text.
D_FOOT3	Third footnote text.
D_FOOT4	Fourth footnote text.
D_FOOT5	Fifth footnote text.
D_FOOT6	Sixth footnote text.
D_FOOT7	Seventh footnote text.
D_FOOT8	Eighth footnote text.
D_FOOT9	Ninth footnote text.
D_USERID	Domino user name.
D_RTFYN	Y or N to generate RTf output.
D_DEBUG	Level of debugging to show in log files.

Value

Global variables defined for use with the reporting tools.

```

`ru_addbignvar` *Assign Big N to Data Frame.*

Description

Pass in a data frame along with identification options and have Big N added to it.

Usage

```
ru_addbignvar(
  dsetintoaddbign,
  dsetintocount,
  countdistinctvars = c("STUDYID", "USUBJID"),
  groupbyvars = NULL,
  totalforvar = NULL,
  totalid = NULL,
```

```

totaldecode = c("Total"),
codedecodevarpairs = NULL,
varcodelistpairs = NULL,
codelistnames = list(),
addbignumtovarvalue = TRUE,
splitchar = " "
)

```

Arguments

dsetintoaddbign
The data set that will hold the derived big N value.

dsetintocount
The data set that will be counted to generate big N.

countdistinctvars
Variable(s) that contain values to be counted uniquely within any output grouping.

groupbyvars Variables in DSETINTOCOUNT to group the data by when counting to deriving the big N.

totalforvar Variable for which overall totals are required within all other grouped class variables.

totalid Value(s) used to populate the variable(s) specified in totalforvar.

totaldecode Value(s) used to populate the variable(s) of the decode variable(s) of the totalforvar.

codedecodevarpairs
Specifies code and decode variable pairs. Those variables should be in parameter GROUPBYVARSNUMER. One variable in the pair will contain the code, which is used in counting and ordering, and the other will contain decode, which is used for presentation.

varcodelistpairs
List of code/decode pairs of variables.

codelistnames
List of decodes for use with decoding code/decode pairs.

addbignumtovarvalue
Place big N in a new variable or append to an existing variable (last groupbyvars value)?

splitchar Text to insert between existing string and big N.

Value

A data frame based on the incoming data frame but collapsed by groups with descriptive statistics added.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
rs_setup(D_POPDATA=repfun::adsl %>%
  filter(SAFFL == 'Y'),
  D_SUBJID=c("STUDYID", "USUBJID"), R_ADAMDATA=".~/data")
G_POPDATA <- G_POPDATA %>% mutate(TRT01AN=
  ifelse(TRT01A=='Placebo',1,
  ifelse(TRT01A=='Xanomeline Low Dose',2,3)))

attr(G_POPDATA$TRT01AN,"label") <- 'Actual Treatment for Period 01 (n)'
adae <- adamdata$adae.rda() %>%
  inner_join(G_POPDATA,
  by=c('STUDYID', 'USUBJID', 'SAFFL', 'TRT01A')) %>%
  filter(TRTEMFL=='Y')
addbign <- ru_addbignvar(adae,
  G_POPDATA,
  groupbyvars=c("TRT01AN", "TRT01A"),
  countdistinctvars=c("STUDYID", "USUBJID"),
  totalforvar=c("TRT01AN"),
  totalid = 99,
  totaldecode = 'Total',
  codedecodevarpairs=c("TRT01AN", "TRT01A"),
  varcodelistpairs=c(""),
  codelistnames=list(),
  addbigntovarvalue=TRUE,
  splitchar="~") %>%
  select(STUDYID, USUBJID, TRT01AN, TRT01A, AEBODSYS, AEDECOD)
```

ru_addpage

Add a Page Number Column to an Existing Dataframe

Description

Take incoming dataframe and add page number variable to it accounting for grouping variables, stacked variables, and no-split variables.

Usage

```
ru_addpage (
  dsetin,
  grpvars = NULL,
  stackvars = NULL,
  varlabl = NULL,
  rowsprbdy = NULL,
  startpaging = 0,
  lastbygrp = FALSE,
  fpage = "all",
  nftnotes = 0,
  nosplitvars = FALSE,
```

```
npgvars = 0
)
```

Arguments

dsetin	The dataframe for which a paging variable will be added.
grpvars	Grouping variables used in the output (used for nosplitvars).
stackvars	Specify stacked grouping variables (reduces # of page lines available for data).
varlabls	Apply labels to outgoing dataframe.
rowsprbdy	Number of rows in the body of the report.
startpaging	Set to zero on first call, and > 0 on recalls to fix widows.
lastbygrp	Set to true if this page is processing the last value of the grouping variables (used when footnote is applied only to last page).
fpage	Setting to 'last' indicates that footnotes are only displayed on the last page.
nftnotes	Enter the number of footnotes (determines # of page lines available for data).
nosplitvars	Setting to true requires all values of the last grouping/stackvar must be on the same page (if possible).
npgvars	Number of page-by variables for this report (reduces # of page lines available for data).

Value

A dataframe based on the incoming dataframe but with a paging variable added.

```

ru_addsupp

Cobmine an SDTM domain with its corresponding Supplemental data set

Description

Pass in an SDTM data frame along with its Supplemental version and they will be combined.

Usage

```
ru_addsupp(dsetin, dsetinsupp)
```

Arguments

dsetin	Incoming data frame to have supplemental data added.
dsetinsupp	The supplemental data set to add.

Value

The original SDTM data set with its supplemental data appended as new variables.

ru_align

Align Columns for Reporting

Description

Pass in a data frame alignment criteria to have columns aligned for reporting.

Usage

```
ru_align(
  dsetin,
  varsin,
  byvars = NULL,
  alignment = "Right",
  compresschry = "Y",
  ncspace = 1
)
```

Arguments

<code>dsetin</code>	The data set holding the columns to align.
<code>varsin</code>	Columns to align.
<code>byvars</code>	Set of group-by variables.
<code>alignment</code>	Type of alignment.
<code>compresschry</code>	Compress by removing leading and trailing spaces for the resulting aligned column?
<code>ncspace</code>	Number of spaces between N and Percent.

Value

A data frame based having the requested columns aligned for reporting.

```

ru_contents*Generate proc contents of data frame similar to that generated by SAS***Description**

Pass in a data frame and the contents will be displayed.

Usage

```
ru_contents(dsetin)
```

Arguments

dsetin	Incoming data frame to have proc contents generated.
--------	--

Value

The proc contents output will be displayed.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
ru_contents(mtcars)
```

ru_data2codelist	<i>Return a list with codelist, code and label based on input codelist dataset.</i>
------------------	---

Description

Pass in a data set from a SAS format catalog (or similar) and have a list returned in the structure of a SAS format for decoding variables.

Usage

```
ru_data2codelist (
  dsetin,
  codelistvarname = "FMTNAME",
  codevarname = "START",
  decodevarname = "LABEL",
  typevarname = "TYPE"
)
```

Arguments

dsetin	Name of incoming data set structured as a SAS format catalog saved as a data set.
codelistvarname	Name of the variable containing the SAS format or similar.
codevarname	Name of the variable that holds the code value.
decodevarname	Name of the variable that holds the decode value.
typevarname	Type of format (character or numeric).

Value

A data frame based on the incoming data frame but with decode values added along with records when completetypes is true.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
rs_setup(R_RFMTDIR=paste0("./inst/"))
list <- ru_data2codelist(rfmtdata$formats())
list$SEXSS$START[[1]] # Code value 1
list$SEXSS$LABEL[[1]] # Decode value 1
list$SEXSS$START[[2]] # Code value 2
list$SEXSS$LABEL[[2]] # Decode value 2
```

ru_datacompare *Compare 2 data frames and report differences.*

Description

Pass in a base and compare data frame to find out if they are equal similar to proc compare in SAS.

Usage

```
ru_datacompare(dsetinbase, dsetincomp, idvars, maxprint = 50)
```

Arguments

dsetinbase	First data set.
dsetincomp	Second data set.
idvars	Match on these values prior to comparing records.
maxprint	Maximum number of differences per variable to display.

Value

An output similar to proc compare will be displayed.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
ru_datacompare(iris,iris,idvars='Species')
```

ru_datetime	<i>Add numeric datetimes to data frame that only has character versions.</i>
-------------	--

Description

Pass in a data frame and variables ending in "DTC" will have corresponding numeric versions created and saved.

Usage

```
ru_datetime(dsetin, includevars)
```

Arguments

dsetin	Incoming data frame to have numeric datetimes added.
includevars	Specify which variables ending in DTC will be processed.

Value

The proc contents output will be displayed.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
ae <- ru_datetime(repfun::ae)
knitr::kable(head(ae[,grepl('(DT\$|TM\$|DTC$)',names(ae))],5),
             caption = "After Invoking ru_labels()")
```

ru_denorm	<i>Transpose a Data Frame</i>
-----------	-------------------------------

Description

Pass in a data frame along with identification options and have it transposed (denormalized, long to wide) to display treatment columns.

Usage

```
ru_denorm(
  dsetin,
  varstodenorm = NULL,
  groupbyvars = NULL,
  acrossvar = NULL,
  acrossvarlabel = NULL,
  acrossvarprefix = "tt_",
  acrossvarsuffix = NULL
)
```

Arguments

dsetin The data set to transpose.
varstodenorm The variables to transpose.
groupbyvars Definition of one row in the output data frame.
acrossvar Variable to define the columns in the transposed data frame.
acrossvarlabel Variable to define the labels in the transposed data frame.
acrossvarprefix Add to the beginning of each value in the across variable in the output data frame.
acrossvarsuffix Add to the end of each value in the across variable in the output data frame.

Details

dsetin, varstodenorm=NULL, groupbyvars=NULL, acrossvar=NULL, acrossvarlabel=NULL, acrossvarprefix="tt_", acrossvarsuffix=NULL

Value

A data frame based on the incoming data frame transposed from long to wide.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```

```
acrossvarprefix=c("tt_ac"))
```

ru_expvarlist *Expand SAS Style Variable/Column List*

Description

Pass in a data frame along with column/variable identifiers formatted with SAS Style (i.e., using colon) and it will be expanded to the actual variable list.

Usage

```
ru_expvarlist(dsetin, varsin = NULL, keepnotexist = FALSE)
```

Arguments

dsetin	A dataframe holding columns whose names will be expanded.
varsin	A SAS style list of variable names.
keepnotexist	If the variable does not exist on the dataframe it will be excluded from the list.

Value

A list of column/variable names.

Author(s)

Yongwei Wang, <yongwei.x.wang@viiivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
df <- data.frame(tt_ac01=c('1','2','3'),
                  tt_ac02=c('a','b','b'),
                  tt_ac03=c('10','11','12'))
chk <- ru_expvarlist(df, varsin="tt_ac:")
print(chk)
```

ru_fillcodedcode *Fill missing code/decode records*

Description

Pass in a data frame with along code/decode variables and values to have missings populated.

Usage

```
ru_fillcodedcode(  
  dsetin,  
  codedecodevarpairs = NULL,  
  varcodelistpairs = NULL,  
  codelistnames = list(),  
  groupbyvars = NULL,  
  completetypes = TRUE  
)
```

Arguments

dsetin The data set that will be counted to generate numerators for counts and percents.
codedecodevarpairs Specifies code and decode variable pairs. Those variables should be in parameter GROUPBYVARSNUMER. One variable in the pair will contain the code, which is used in counting and ordering, and the other will contain decode, which is used for presentation.
varcodelistpairs List of code/decode pairs of variables.
codelistnames List of decodes for use with decoding code/decode pairs.
groupbyvars Set of by-variables used to merge the incoming data set with the decode data set.
completetypes Keep all code/decode pairs even it not present on the incoming data set?

Value

A data frame based on the incoming data frame but with decode values added along with records when completetypes is true.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
fmtlist <- list('SEXS'=list('START'=list('M','F'),
                             'LABEL'=c('Male','Female')))
ads1 <- repfun::ads1
ads12 <- ru_fillcodedcode(ads1, codedecodevarpairs=c("SEX", "SEXDCD"),
                           varcodelistpairs=c("SEX", "SEXS"),
                           codelistnames=fmtlist)
unique(ads12[c("SEX", "SEXDCD")])
```

ru_fillna

Fill NA values with specified values or zeros/blanks by default.

Description

Pass in a data frame along with a vector of variables and a vector of fill values. (Default fill is 0 for numeric and blank " " for character.)

Usage

```
ru_fillna(dsetin, vars = NULL, fills = NULL)
```

Arguments

dsetin	Incoming data frame to have labels added to columns.
vars	Vector of variables to replace NA values.
fills	Vector of fill values.

Value

The incoming data frame with the requested NA values replaced.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
ru_fillna(airquality, vars=c('Ozone','Solar.R'), fills=c(1111,2222))
```

ru_freq*Create Percentage based on Numerator and Denominator Data*

Description

Pass in a data frame along with identification options and have descriptive statistics derived.

Usage

```
ru_freq(
  dsetin,
  dsetindenom = NULL,
  countdistinctvars = NULL,
  groupbyvarsnumer = NULL,
  groupbyvarsdenom = NULL,
  resultstyle = "NUMERPCT",
  totalforvar = NULL,
  totalid = NULL,
  totaldecode = c("Total"),
  anyeventvars = NULL,
  anyeventvalues = NULL,
  codedecodevarpairs = NULL,
  varcodelistpairs = NULL,
  codelistnames = list(),
  groupminmaxvar = NULL,
  resultpctdps = 0
)
```

Arguments

dsetin	The data set that will be counted to generate descriptive statistics.
dsetindenom	Input dataset containing data to be counted to obtain the denominator.
countdistinctvars	Variable(s) that contain values to be counted uniquely within any output grouping.
groupbyvarsnumer	Variables in DSETINNUMER to group the data by when counting to obtain the numerator.
groupbyvarsdenom	Variables in DSETINDENOM to group the data by when counting to obtain the denominator.
resultstyle	The appearance style of the result columns that will be displayed in the report.
totalforvar	Variable for which overall totals are required within all other grouped class variables.
totalid	Value(s) used to populate the variable(s) specified in totalforvar.

totaldecode Value(s) used to populate the variable(s) of the decode variable(s) of the total-forvar.

anyeventvars Set of variables for which total rows will be added.

anyeventvalues Set of text values for total rows generated above.

codedecodevarpairs Specifies code and decode variable pairs. Those variables should be in parameter GROUPBYVARSNUMER. One variable in the pair will contain the code, which is used in counting and ordering, and the other will contain decode, which is used for presentation.

varcodelistpairs List of code/decode pairs of variables.

codelistnames List of decodes for use with decoding code/decode pairs.

groupminmaxvar Specify if frequency of each group should be from first or last value of a variable in format MIN(variables).

resultpctdps The reporting precision for percentages.

Value

A data frame based on the incoming data frame but collapsed by groups with descriptive statistics added.

Author(s)

Yongwei Wang, <yongwei.x.wang@viiivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
rs_setup(D_POPDATA=repfun::adsl %>%
           filter(SAFFL == 'Y'),
           D_SUBJID=c("STUDYID", "USUBJID"),
           R_ADAMDATA="./data")
G_POPDATA %>%
  mutate(TRT01AN = ifelse(TRT01A == 'Placebo', 1,
                         ifelse(TRT01A == 'Xanomeline Low Dose', 2, 3))) -> G_POPDATA
attr(G_POPDATA$TRT01AN, "label") <- 'Actual Treatment for Period 01 (n)'
adae <- adamdata$adae.rda() %>%
  inner_join(G_POPDATA, by=c('STUDYID', 'USUBJID', 'SAFFL', 'TRT01A'))
aesum <- ru_freq(adae,
                  dsetindenom=G_POPDATA,
                  countdistinctvars=c('STUDYID', 'USUBJID'),
                  groupbyvarsnumer=c('TRT01AN', 'TRT01A', 'AEBODSYS', 'AEDECOD'),
                  anyeventvars = c('AEBODSYS', 'AEDECOD'),
                  anyeventvalues = c('ANY EVENT', 'ANY EVENT'),
                  groupbyvarsdenom=c('TRT01AN'),
                  resultstyle="NUMERPCT",
```

```
totalforvar=c('TRT01AN'),
totalid=99,
totaldecode='Total',
codedecodevarpairs=c("TRT01AN", "TRT01A"),
varcodelistpairs=c(""),
codelistnames=list(),
resultpctdps=0)
```

ru_getdata*Assign Big N to Data Frame.*

Description

Merge input data with population data to keep only subjects which are in population sub data,

Usage

```
ru_getdata(
  dsetin,
  dsetinpop = G_POPDATA,
  subjidvars = c("STUDYID", "USUBJID"),
  subpop = G_SUBPOP,
  pop = G_POP,
  keeppopvars = G_KEEPPOPVARS
)
```

Arguments

dsetin	The data set that will be merged with the population data set.
dsetinpop	The population data set.
subjidvars	Variable(s) that define a unique subject.
subpop	A sub-population expression where variables are on DSETINPOP.
pop	The population expression (SAFFL=='Y').
keeppopvars	Variables to keep on the population data set.

Value

A data frame based on the incoming data frame but restricted to the population of interest with relevant population variables added.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
rs_setup(D_POP="SAFFL",
         D_POPLBL="Safety", D_POPDATA=repfun::adsl,
         D_SUBJID=c("STUDYID", "USUBJID"), R_ADAMDATA=".~/data")
G_POPDATA <- G_POPDATA %>%
  mutate(TRT01AN = ifelse(TRT01A == 'Placebo', 1,
                         ifelse(TRT01A == 'Xanomeline Low Dose', 2, 3)),
         SAFFL = ifelse((row_number() %% 10) == 0, 'N', SAFFL))
attr(G_POPDATA$TRT01AN, "label") <- 'Actual Treatment for Period 01 (n)'
attr(G_POPDATA$SAFFL, "label") <- 'Safety Population Flag'
adae <- adamdata$adae.rda() %>% select(-SAFFL)
adae2 <- ru_getdata(adae, G_POPDATA, c("STUDYID", "USUBJID"),
                     keeppopvars=c("TRT01AN", "TRT01A"))
```

ru_groupbyvars *Modify groupbyvars by adding or removing decode vars.*

Description

Pass in a vector of group-by variables along with a vector of code/decode pairs to have decode variables added or removed.

Usage

```
ru_groupbyvars(groupbyvars, codedecodevarpairs, adddecode = TRUE)
```

Arguments

groupbyvars Vector of group-by variables.

codedecodevarpairs

Specifies code and decode variable pairs. Those variables should be in parameter GROUPBYVARSNUMER. One variable in the pair will contain the code, which is used in counting and ordering, and the other will contain decode, which is used for presentation.

adddecode Add decode variables (true) or remove (false).

Value

A data frame based on the incoming data frame but collapsed by groups with counts and percents added.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
 Chris Rook, <christopher.x.rook@gsk.com>

Examples

```

add_decode <- ru_groupbyvars(
  c("TRTCD", "TRTGRP", "ATOXGRN", "AEDECOD", "AEBODSYS"),
  c("TRTCD", "TRTGRP", "ATOXGRN", "ATOXGR"), TRUE)
rem_decode <- ru_groupbyvars(
  c("TRTCD", "TRTGRP", "ATOXGRN", "AEDECOD", "AEBODSYS"),
  c("TRTCD", "TRTGRP", "ATOXGRN", "ATOXGR"), FALSE)

```

`ru_labels` *Assign labels to variables in a data frame*

Description

Pass in a data frame along with a named list of columns with their corresponding labels.

Usage

```
ru_labels(dsetin, varlabels = list(), style = c("base", "Hmisc"))
```

Arguments

dsetin	Incoming data frame to have labels added to columns.
varlabels	List of variables and their labels.
style	Type of method used to add labels.

Value

The incoming data frame with labels added.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

ru_libname

Automate retrieval of data sets/frames in specified folder.

Description

Provide a folder containing data sets/frames and have a list of function calls returned that can be used to quickly access individual data sets/frames.

Usage

```
ru_libname(datapath)
```

Arguments

datapath	Location of reporting data sets.
----------	----------------------------------

Value

List of function calls for use in quickly accessing individual data sets/frames.

Author(s)

Yongwei Wang, <yongwei.x.wang@viiivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
adamdata <- ru_libname('./data')
adamdata$adae.rda() %>% filter(TRTEMFL=='Y') -> teae
print(head(teae[,c(1:10)]),10)
```

ru_list

R function to mimic the SAS macro %tu_list.

Description

Pass in a dataframe and reporting settings to have RTF output generated.

Usage

```
ru_list(
    dsetin,
    stackvar1 = NULL,
    stackvar2 = NULL,
    stackvar3 = NULL,
    stackvar4 = NULL,
    stackvar5 = NULL,

```

Arguments

<code>stackvar1</code>	Create Stacked variables (e.g. <code>stackvar1=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)
<code>stackvar2</code>	Create Stacked variables (e.g. <code>stackvar2=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)
<code>stackvar3</code>	Create Stacked variables (e.g. <code>stackvar3=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)
<code>stackvar4</code>	Create Stacked variables (e.g. <code>stackvar4=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)
<code>stackvar5</code>	Create Stacked variables (e.g. <code>stackvar5=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)
<code>stackvar6</code>	Create Stacked variables (e.g. <code>stackvar6=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)
<code>stackvar7</code>	Create Stacked variables (e.g. <code>stackvar7=list(varsin=c('invid','subj'), varout='st_inv_subj', sepc='/', splitc='\n')</code>)

stackvar8	Create Stacked variables (e.g. stackvar8=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar9	Create Stacked variables (e.g. stackvar9=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar10	Create Stacked variables (e.g. stackvar10=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar11	Create Stacked variables (e.g. stackvar11=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar12	Create Stacked variables (e.g. stackvar12=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar13	Create Stacked variables (e.g. stackvar13=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar14	Create Stacked variables (e.g. stackvar14=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
stackvar15	Create Stacked variables (e.g. stackvar15=list(varsin=c('invid','subjid'), varout='st_inv_subj', sepc='/', splitc='\n'))
display	Specifies whether the report should be created
varlabelstyle	Specifies the label style for variables (SHORT or STD)
dddatasetlabel	Label to be applied to the DD dataset
splitchar	Split character
getdatayn	Control execution of tu_getdata
labelvarsyn	Control execution of tu_labelvars
computebeforepagelines	Specifies the text to be produced for the Compute Before Page lines (labelkey labelfmt colon labelvar)
computebeforepagevars	Names of variables that shall define the sort order for Compute Before Page lines
columns	Column parameter
ordervars	Order variables
descending	Descending ORDERVARS
orderformatted	ORDER=FORMATTED variables
orderfreq	ORDER=FREQ variables
orderdata	ORDER=DATA variables
noprintvars	No print vars (usually used to order the display)
byvars	By variables
flowvars	Variables with flow option
widths	Column widths

```

defaultwidths          List of default column widths
idvars                ID variables
linevars              Order variable printed with line statements.
centrevars            Centre justify variables
leftvars              Left justify variables
rightvars             Right justify variables
colspacing            Overall spacing value.
varspacing            Spacing for individual variables.
formats               Format specification
labels                Label definitions.
break1                Break statements.
break2                Break statements.
break3                Break statements.
break4                Break statements.
break5                Break statements.
nowidowvar            Not in version 1
sharecolvars          Order variables that share print space.
sharecolvarsindent   Indentation factor
overallsummary        Overall summary line at top of tables
proptions              PROC REPORT statement options
denormyn              Controls whether denormalisation will occur
varsToDenorm          List of variables to be denormalised/transposed. Passed one at a time to the
                      PROC TRANSPOSE VAR statement.
groupByVars            List of BY variables passed to PROC TRANSPOSE BY statement.
acrossVar              Variable used in the PROC TRANSPOSE ID statement.
acrossVarLabel         Variable used in the PROC TRANSPOSE IDLABEL statement.
acrossColVarPrefix    Text passed to the PROC TRANSPOSE PREFIX statement.
acrossVarListName     Macro variable name to contain the list of columns created by the transpose of
                      the first variable in VARSTODENORM.
lpp                   Lines within body of report (only used with manual paging).
rpp                   Total lines per page, when there is no wrapping and excluding titles and foot-
                      notes - passed directly to r2rtf().
toprow                Control lines above first column header.
spanlbls              List of level 1 column spanning header labels.

```

spanwidths	List of level 1 column spanning header widths.
spanjust	List of level 1 column spanning header justifications.
spanbbord	List of level 1 column spanning bottom border values.
spantbord	List of level 1 column spanning top border values.
span2lbls	List of level 2 column spanning header labels (above Level 1).
span2widths	List of level 2 column spanning header widths (above Level 1).
span2just	List of level 2 column spanning header justifications (above Level 1).
span2bbord	List of level 2 column spanning bottom border values (above Level 1).
similar	to SAS statement pagevars Break after / page

Value

A formattted RTF report is generated to the specified file.

ru_load_library *Load a list of libraries*

Description

Given a list of packages, check if installed and generate message, otherwise load package.

Usage

```
ru_load_library(pkgs)
```

Arguments

pkgs A list of packages to check if installed and then load.

Value

No return value, packages are loaded.

Author(s)

Yongwei Wang, <yongwei.x.wang@viivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
ru_load_library(c("janitor", "gmodels", "epiR", "DescTools",
                 "coin", "irr", "Exact", "stats"))
```

`ru_setdata`*Append data sets even when variables do not match***Description**

Pass in a collection of data frames separated by commas and they will be appended.

Usage

```
ru_setdata(..., keeprownames = TRUE)
```

Arguments

`...` A collection of data frames.

`keeprownames` Convert row names on data frame to columns and keep the column.

Value

The incoming data frames combined.

Author(s)

Yongwei Wang, <yongwei.x.wang@viiivhealthcare.com>

Chris Rook, <christopher.x.rook@gsk.com>

Examples

```
ru_setdata(mtcars, airquality)
```

`ru_stackvar`*Stack Columns of a Dataframe into New Column***Description**

Pass in a dataframe and columns to stack and have new dataframe returned that contains the stacked columns.

Usage

```
ru_stackvar(
  dsetin,
  sepc = "/",
  splitc = "\\line",
  varsin = NULL,
  varout = NULL,
  varlabel = NULL
)
```

Arguments

dsetin	Name of incoming dataframe with columns to have stacked.
sepc	Separator character between the stacked columns.
splitc	Split character between stacked columns.
varsin	List of variables to be stacked.
varout	Name of stacked column in dataframe.
varlabel	Label for new stacked column.

Value

The incoming dataframe with columns stacked as requested.

  resultpctdps=0) %>%
ru_denorm(varstodenorm=c("tt_result", "PERCENT"),
  groupbyvars=c("tt_summarylevel", "AEBODSYS", "AEDECOD"),
  acrossvar="TRT01AN", acrossvarlabel="TRT01A",
  acrossvarprefix=c("tt_ac", "tt_p")) %>%
mutate(ord1=ifelse(tt_summarylevel==0, 0, 1)) %>%
rename(ord2=tt_summarylevel) %>%
arrange(ord1,AEBODSYS,ord2,AEDECOD) %>%
```

```
select(-c(starts_with('tt_p'),starts_with('ord'))) %>%
  ru_stackvar(varsin=c('AEBODSYS','AEDECOD'),varout='SYSPREF',
               varlabel='Body System/Preferred Term')
```

ru_sumstats *Calculate Descriptive Statistics*

Description

Pass in a data frame along with identification options and have descriptive statistics derived.

Usage

```
ru_sumstats(
  dsetin,
  analysisvars = NULL,
  analysisvarlabels = "",
  groupbyvars = NULL,
  statslist = c("n", "mean", "median", "min", "max", "sd", "q1", "q3"),
  statsinrowsyn = "N",
  analysisvardps = 0,
  statsdps = list(mean = 1, median = 1, sd = 2, se = 2),
  codedecodevarpairs = c(""),
  varcodelistpairs = c(""),
  codelistnames = list(),
  totalforvar = NULL,
  totalid = NULL,
  totaldecode = c("Total")
)
```

Arguments

- dsetin The data set that will be counted to generate descriptive statistics.
- analysisvars The variables to be analysed.
- analysisvarlabels Specify a label statement which will be used to define labels for statistics analysis variables defined in parameter ANALYSISVARS.
- groupbyvars Specifies the variables whose values define the subgroup combinations for the analysis. The variables can be divided by statements inside of (and) to represent different levels of subgroup.
- statslist Specifies a list of summary statistics to be produced.
- statsinrowsyn Place resulting descriptive statistics in rows or columns.
- analysisvardps Base precision of descriptive statistics prior to incorporating STATSDPS details.

<code>statsdps</code>	List of additional statistic-specific precision values to add to ANALYSISVARDPS.
<code>codedecodevarpairs</code>	Specifies code and decode variable pairs. Those variables should be in parameter GROUPBYVARSNUMER. One variable in the pair will contain the code, which is used in counting and ordering, and the other will contain decode, which is used for presentation.
<code>varcodelisttpairs</code>	List of code/decode pairs of variables.
<code>codelistnames</code>	List of decodes for use with decoding code/decode pairs.
<code>totalforvar</code>	Variable for which overall totals are required within all other grouped class variables.
<code>totalid</code>	Value(s) used to populate the variable(s) specified in totalforvar.
<code>totaldecode</code>	Value(s) used to populate the variable(s) of the decode variable(s) of the totalforvar.

Value

A data frame based on the incoming data frame but collapsed by groups with descriptive statistics added.

```

`ru_width_rtf`*Create a List of Relative Widths of Columns for RTF Outputs*

Description

Pass in a data set and identify the columns for reporting to have estimated relative column width returned.

Usage

```
ru_width_rtf(dsetin, varsin = list(), widths = list(), type = "PCT")
```

Arguments

dsetin	A dataframe containing columns for reporting.
varsin	A vector of variables on the reporting dataframe that will be displayed in the output.
widths	Provide a set of default widths for some or all variables as desired. (These will be used.)
type	Specify the type of width to be computed and returned. (Currently supports PCT, which refers to relative widths not percentages.)

Value

A list of widths of the same size as the list specified by varsin.

Author(s)

Yongwei Wang, <yongwei.x.wang@viiivhealthcare.com>
Chris Rook, <christopher.x.rook@gsk.com>

Examples

```

```

suppae

Supplemental Adverse Events

Description

A SDTM SUPPAE dataset from the CDISC pilot project

Usage

suppae

Format

A data frame with 10 columns:

STUDYID Study Identifier

RDOMAIN Related Domain Abbreviation

USUBJID Unique Subject Identifier

IDVAR Identifying Variable

IDVARVAL Identifying Variable Value

QNAM Qualifier Variable Name

QLABEL Qualifier Variable Label

QVAL Data Value

QORIG Origin

QEVAL Evaluator

Details

Supplemental Adverse Events

A SDTM SUPPAE dataset from the CDISC pilot project

Source

Access the source of the Supplemental Adverse Events dataset.

suppdm

Supplemental Demography

Description

A SDTM SUPPDM dataset from the CDISC pilot project

Usage

suppdm

Format

A data frame with 10 columns:

STUDYID Study Identifier

RDOMAIN Related Domain Abbreviation

USUBJID Unique Subject Identifier

IDVAR Identifying Variable

IDVARVAL Identifying Variable Value

QNAM Qualifier Variable Name

QLABEL Qualifier Variable Label

QVAL Data Value

QORIG Origin

QEVAL Evaluator

Details

Supplemental Demography

A SDTM SUPPDM dataset from the CDISC pilot project

Source

Generated dataset.
